

Product Highlights

- Operating temperature up to +125°C (+260°F)
- Enhanced abrasion resistance
- MSHA acceptance: IC - 171/1
- Available in black only
- High coverage for maximum protection
- Fluid resistant
- Custom printing available

Typical Applications

- Server Rack Routing
- Copper Data Cables
- Copper Power Cables

ProGard® 2631 is a durable, woven nylon sleeve constructed of high denier nylon yarn. ProGard 2631 provides enhanced abrasion protection over hose assemblies, cables, wires and other applications where rugged environments may cause wires and hoses to be chafed and damaged.

ProGard 2631's dense construction provides maximum coverage of the hoses and cables it protects, assuring enhanced abrasion and cutthrough resistance. These properties extend the service life of the protected component, and provide the cost savings associated with decreased hose replacements.

ProGard 2631 is used in a wide range of industries including hydraulics, mining, construction & agriculture.

ProGard 2631 installed on a hydraulic hose

Our manufacturing sites are certified ISO 9001, IATF 16949, or AS/EN 9100, ISO 14001 and ISO 45001 (Selected Sites)
